

FRESHTRACKERTM

Customized Management System

Freshtracker is an innovative quality tracking system to which all elements of the production system are measurable and responsive to. Our unique software allows us to trace the origins and characteristics of individual products from harvesting, processing and packaging, through to point-of-sale. With the ability to compare and analyse yields, ensure a high-quality end product and manage production efficiently, **Freshtracker** is the key to increased profit.

Traceability

Provides ability to select which characteristics are traceable and accountable. If contamination is found, Freshtracker isolates the problem to the specific time, field, row, picker and bin, saving you from Total Farm Contamination.

FRESHTRACKERTM

Additional Features

Product Quality Attributes

FreshTracker identifies and records product quality attributes related to product shelf life. This information is generated live from BBC Technologies equipment so managers are never left guessing the quality levels of their product. Geographical sales decisions can be made easier and faster based on the FreshTracker mark generated for any given clamshell or batch.

Performance Data

Performance data of your packing operation is sent from BBC Technologies machines to the **FreshTracker** database to provide up-to-date line performance information. Continuous data allows the ability to generate batch reports on-the-fly.

Live Reports

FreshTracker data is replicated and stored at a secure website for monitoring and retrieval. Instant reports are easily retrievable both on-site from the local server, off-site with FreshTracker Mobile and from your personal login at freshtracker.com.

Line Integration

FreshTracker provides line integration to automate and minimize personnel dependency. This feature provides line flow control, with line stopping and starting from any of BBC Technologies hi-tech machines. Line integration optimizes the cleaning and packing functions for more efficient production with less staff.

Transparency

FreshTracker offers transparency to reinforce packer/grower relations. By having all product characteristics prepared by a third party system and classified by lot and time, the grower can clearly see the results of their harvest activities.

Instant reports are easily retrievable both on-site from the local server, off-site with FreshTracker Mobile and from your personal login at freshtracker.com.
